

Faculté des Sciences et Technologies (FST)

Rapport du travail de Laboratoire N° 5 _Réseaux I

Etudiant : Donsam Jean Gabard NOEL

Professeur : Ismael SAINT AMOUR

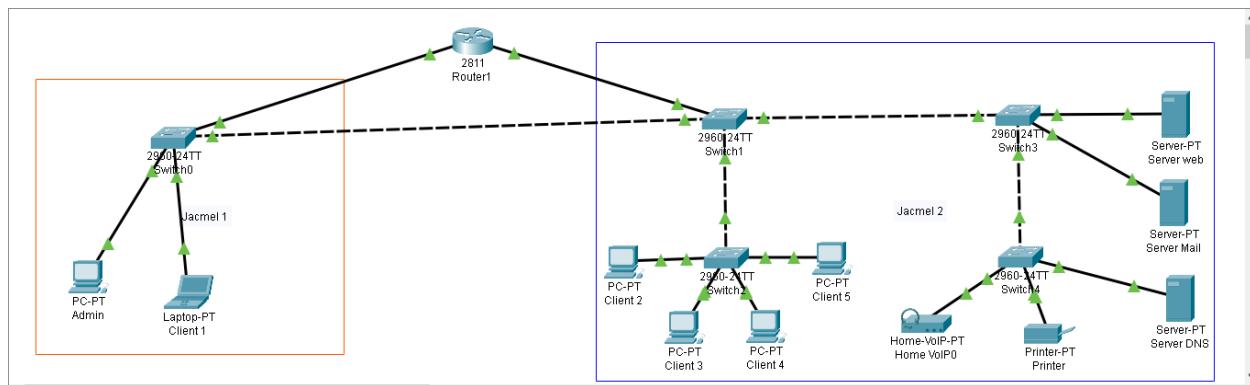

Niveau : L3

29 Novembre 2025

L'objectif de ce TD est de :

- Configurer un serveur DNS centralisé dans un réseau.
- Associer plusieurs noms de domaine à différents serveurs (Web, Mail, FTP).
- Intégrer le DNS avec d'autres services (Web Server).
- Tester la résolution de noms depuis des PC clients et depuis le routeur.
- Configurer un serveur Web (HTTP et HTTPS) dans Cisco Packet Tracer.
- Comprendre la différence entre HTTP et HTTPS.
- Tester l'accès aux pages web depuis des PC clients.

- Reproduisez cette topologie en configurant les services DNS, HTTP et HTTPS, puis en affichant une page web.

- Test de connexion entre les différents appareils

Conclusion

Ce TD m'a permis de mettre en œuvre la réussite du service DNS et des protocoles web http et https et une intégration fonctionnelle de service de la topologie réseau via Cisco Packet Tracer.
